HP97 - 67

New HP97 emulator for windows

13/02/2012 : math pack done by T. Ernst added.

(Now MERGE for Card reader is working !)

- full featured emulator
- printer working in all mode (trace, norm, man)
- card reader ok
- card pack concept (standard pack is given, try right-clicks)

scanocode shortcuts are for a french keymap, feel free to modify it

Rom taken from an old release of non-pareil
 Some hints taken from the non pareil sources
 More hints taken from schematics from HP97 service manual
 More hints from a personal dis-assembly of the roms (see 97.obj.lst)
 Printer windows resizeable
 MERGE now working
 Speed select working (be careful, x1 is slow as the real one, and x8 is too fast for PAUSE)
 Program helper show the decoded instruction in program mode

New HP 67 Emulator

Added an auto checksum for cards

Corrected R/S bug for HP67, added max speed

New download (corrupted ??) with new fonts and printer display on main HP97

Activating registry save for reload of last configuration (see readme to clean it if troubles)

The 97-release is buggy ... still searching ... 97-debug seems ok

Minor correction, load the 1.5 version to be sure to have the latest non buggy one

New v1.6 with PAUSE working at normal speed even if speed of emulator isn't x1 :)
 (better than a 15C LE)

New v1.7

add an HP97+ model (full memory loaded, see readme)

v1.7.1

more speed, less bug and still more memory

896 steps and 106 memory ...

v1.7.2

hp97 rom load bug corrected

v1.7.3

STO(e) had bug, now corrected
